

How to Enable TLS 1.2 (For Win7)

1. Click **“Start”**, select **“All Programs”**, **“Java”**, **“Configure Java”**.

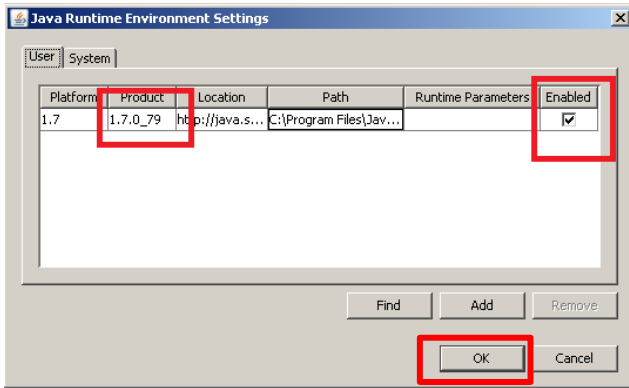

2. Click **“Java”**, then **“View...”**.

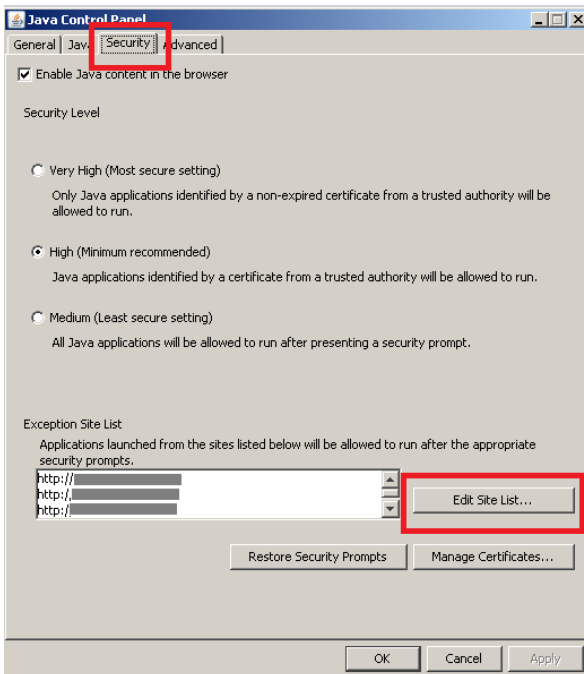

3. Make sure that:
- Java version is 1.7.0_51 or above
 - The **“Enabled”** box is ticked

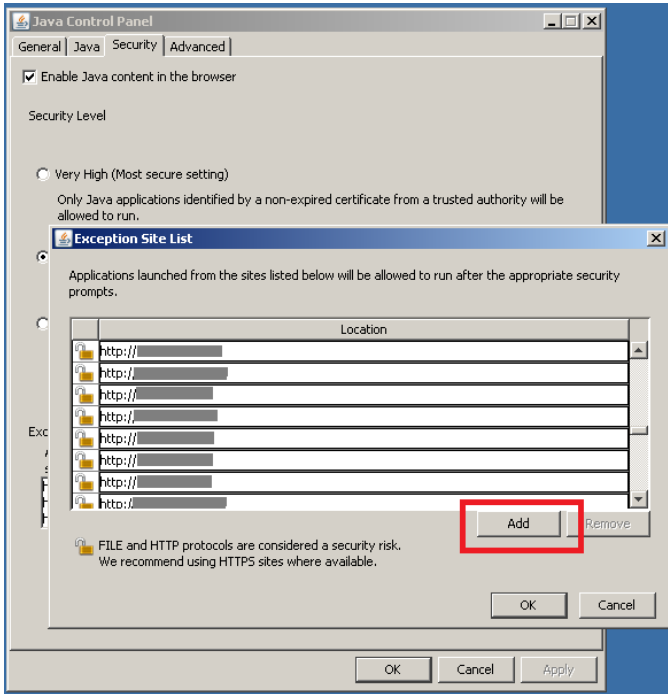

Then, click **“OK”**.

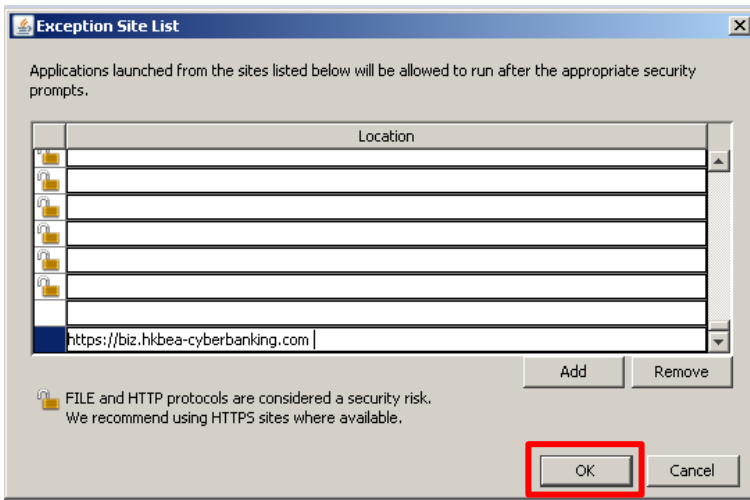

4. Select **“Security”**, **“Edit Site List...”**.

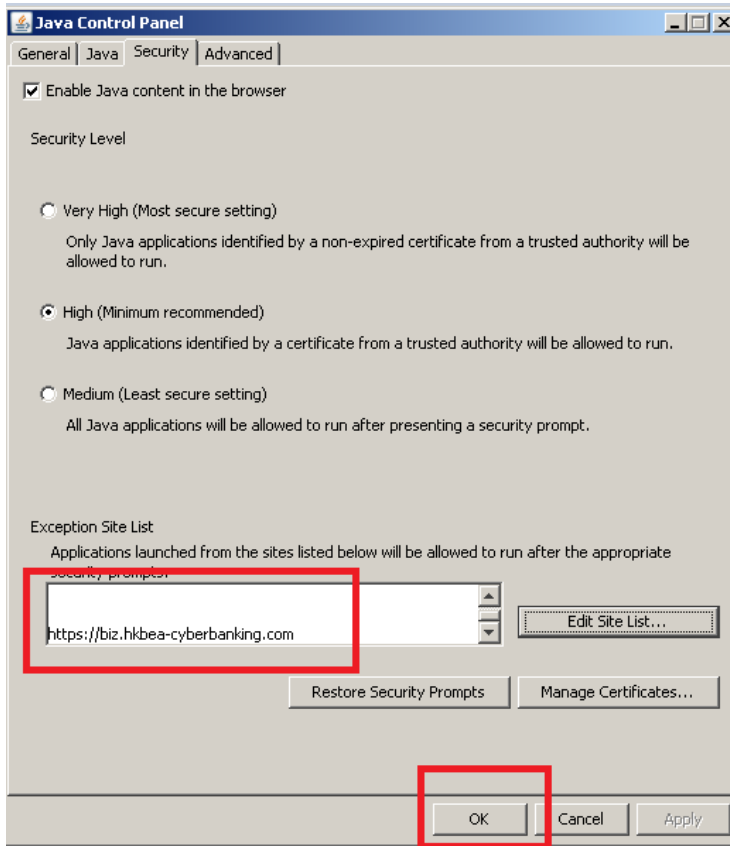

5. Click “Add”.

6. Add “<https://biz.hkbea-cyberbanking.com>” to “Location” and click “OK”.

7. The domain will be listed in the “**Exception Site List**”. Now click “**OK**”.

8. Select “**Advanced**”, enable “**Use TLS 1.2**”, then click “**OK**”.
